PROFILE

Computer Engineering graduate with hands-on experience building scalable full-stack web applications. Skilled in designing and developing RESTful APIs, implementing secure authentication and authorization, optimizing database-driven systems, and deploying production-ready applications. Passionate about writing clean, maintainable code and delivering reliable software that provides a seamless user experience.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, Python, C/C++

Frontend: React, Next.js, Redux Toolkit, TanStack Query, Tailwind CSS, React Router

Backend: Node.js, Express.js

Databases: MySQL, PostgreSQL, MongoDB, SQLite

ORMs: Prisma, Drizzle ORM

Cloud & DevOps: Oracle Cloud, Nginx, PM2, GitHub Actions, CI/CD, Vercel

Core Concepts: REST APIs, JWT Authentication

Developer Tools: Git, GitHub, Postman, VS Code, Figma, PyCharm

EXPERIENCE

Software Developer Intern – NexFort (Pvt) Ltd

Galle, Sri Lanka

Internship

June 2025 – Jul 2026

- Developed responsive **React-based real-estate platforms** serving public users and administrators, implementing property discovery, authentication, dashboards, and content management features.
- Built public-facing experiences for property sales, rentals, land, commercial listings, projects, agents, careers, and dynamic content using **React, Vite, and Tailwind CSS**.
- Implemented authenticated user workflows including profile management, property posting and editing, saved listings, messaging, search alerts, and inquiry history.
- Engineered **10+ administrative modules** covering property and project management, users, agents, agencies, media assets, inquiries, careers, SEO, widgets, content pages, and tenant configuration.
- Integrated **REST APIs** using **Axios** and managed application state with **Redux Toolkit**, ensuring consistent data flow across complex frontend features.
- Implemented protected routes, permission-based navigation, role-based access control, and cookie-based authentication using **Laravel Sanctum** with CSRF protection.

Freelance Full Stack Developer

Contract-Based

Apr 2026 – Present

- Collaborated directly with clients and stakeholders to gather requirements, estimate timelines, translate business needs into scalable technical solutions, and deliver production-ready software.
- Developed a multi-tenant debt recovery platform for the vehicle-finance industry using Next.js 16, React, TypeScript, Redux Toolkit, and TanStack Query, supporting organization-scoped operations and role-based workflows.
- Designed and integrated 75+ REST API operations across authentication, sales recovery, inventory, reporting, and policy-based access control modules using Axios and custom React Query hooks.
- Implemented secure session management with cookie-based authentication, CSRF protection, automatic token refresh, organization-aware routing, and permission-based access control for enterprise users.
- Deployed production releases to an Oracle Cloud VPS through GitHub Actions CI/CD pipelines, performed ongoing maintenance, resolved production issues, delivered multiple feature releases, and optimized application reliability.
- Prepared technical documentation, provided post-deployment support, fixed client-reported issues, and continuously enhanced the platform based on stakeholder feedback.

PROJECTS

- GigPulse** | *Next.js, React, TypeScript, Express.js, MySQL, Prisma, Oracle Cloud (VPS), Nginx, PM2* [GitHub](#) / [Website](#)
- Developed a freelance CRM and operating system with a Next.js 16 App Router frontend and a modular Express.js REST backend.
 - Built workflows for client management, lead tracking with status transitions, and an interactive Kanban board for task organization.
 - Implemented invoice generation with subtotal, tax, and discount calculations, along with proposal status tracking and meeting scheduling records.
 - Set up secure JWT authentication with refresh-token rotation, HTTP-only cookies, role-based access control, and Prisma-powered persistence.
 - Deployed the application on Oracle Cloud VPS using Nginx as a reverse proxy, PM2 for process supervision, GitHub Actions for CI/CD, and HTTPS from Let's Encrypt.
- Queline** | *Next.js, React, TypeScript, Express.js, PostgreSQL, Prisma, Oracle Cloud (VPS), Nginx* [GitHub](#) / [Website](#)
- Designed and built a digital queue management system using a Next.js 16 frontend paired with a separately deployable Express.js REST API.
 - Created secure admin tools for managing services, issuing walk-in tokens, and handling queue actions such as calling the next customer, skipping, completing, and resetting tokens.
 - Added QR-based public access so customers can join queues, receive tokens, and monitor live queue status with estimated waiting time updates.
 - Integrated email/password login and Google OAuth, API-driven session handling, idempotent queue logic, and PostgreSQL storage through Prisma ORM.
 - Hosted the platform on an Oracle Cloud VPS with Nginx reverse proxying, PM2 process management, HTTPS via Let's Encrypt, and Bash-based deployment automation.
- EduSuite** | *Next.js, React, TypeScript, SQLite, Drizzle ORM, Tailwind CSS* [GitHub](#) / [Website](#)
- Built a student information and academic administration platform for managing records, courses, enrollments, grades, and department data.
 - Created Next.js Route Handlers for CRUD operations backed by SQLite and Drizzle ORM, with relational constraints and soft-delete support.
 - Enabled course enrollment flows with duplicate-entry protection, grade updates, cumulative GPA calculations, and printable academic transcripts.
 - Added Zod validation, debounced multi-filter search, pagination, and responsive data tables for smoother registry operations.
 - Developed an analytics dashboard with enrollment insights, course popularity charts, and an auto-updating audit trail for create, update, delete, and enrollment activity.

EDUCATION

Delhi Technological University <i>Bachelor of Technology in Computer Engineering</i>	Delhi, India 2022 – 2026
Zahira College <i>Physical Science Stream</i>	Kalmunai, Sri Lanka 2020

ACHIEVEMENTS

Got Selected for the Nehru Memorial Scholarship scheme to study Computer Engineering at the Delhi Technological University (formerly Delhi College of Engineering). Scholarship was offered by the Indian Council for Cultural Relations (ICCR).
